leaflet HPV vaccination

Date

Subject Invitation HPV vaccination

Dear parent/carer,

I would like to invite your child for the HPV vaccination.

Why is this vaccination important?

HPV is a virus that can cause various types of cancer in men and women. For example, cancer in the mouth and throat, penis, vagina and cervix. With the HPV vaccination, your child is protected against HPV in time. Read more about this in the leaflet.

Where and when?

The envelope also contains a letter from the Youth Healthcare Service (JGZ). It tells you when and where your child can have the first HPV injection. Sometimes this invitation already contains a date and location. Six months after the first vaccination, you will be invited for the second.

What to bring to the appointment?

- This letter (please keep this letter)
- Your child's ID card or passport
- The vaccination certificate

HPV vaccine

From 1 September 2026, we will be using an HPV vaccine that protects against even more types of the HPV virus. Detailed information on the HPV vaccine is available at: rvp.nl/bijsluiters
After the injection, your child may experience side effects such as pain at the injection site for 1 to 3 days. Read more about side effects on the leaflet.

Information and questions

- You can ask a JGZ physician or nurse your questions.
- More information can be found on the website rvp.nl/vaccinatie-hpv.
- Watch the video with easy explanation on hpv.steffie.nl or scan the QR code:

Kind regards,

Jeanne-Marie Hament, physician
Manager of the National Immunisation Programme
